## Installation of a Programming Language - Python

I chose to install a dedicated Python IDE for coding (Figure 1). Installation instructions follow.

1. Go to [PyCharm's](#) website
2. Click "Download Now"
3. Click "Download" under the *Community* heading
4. Mount the .dmg installer (macOS) and run the contained executable to install the app
5. Find and open the installed application in the /Applications folder
6. Code away!

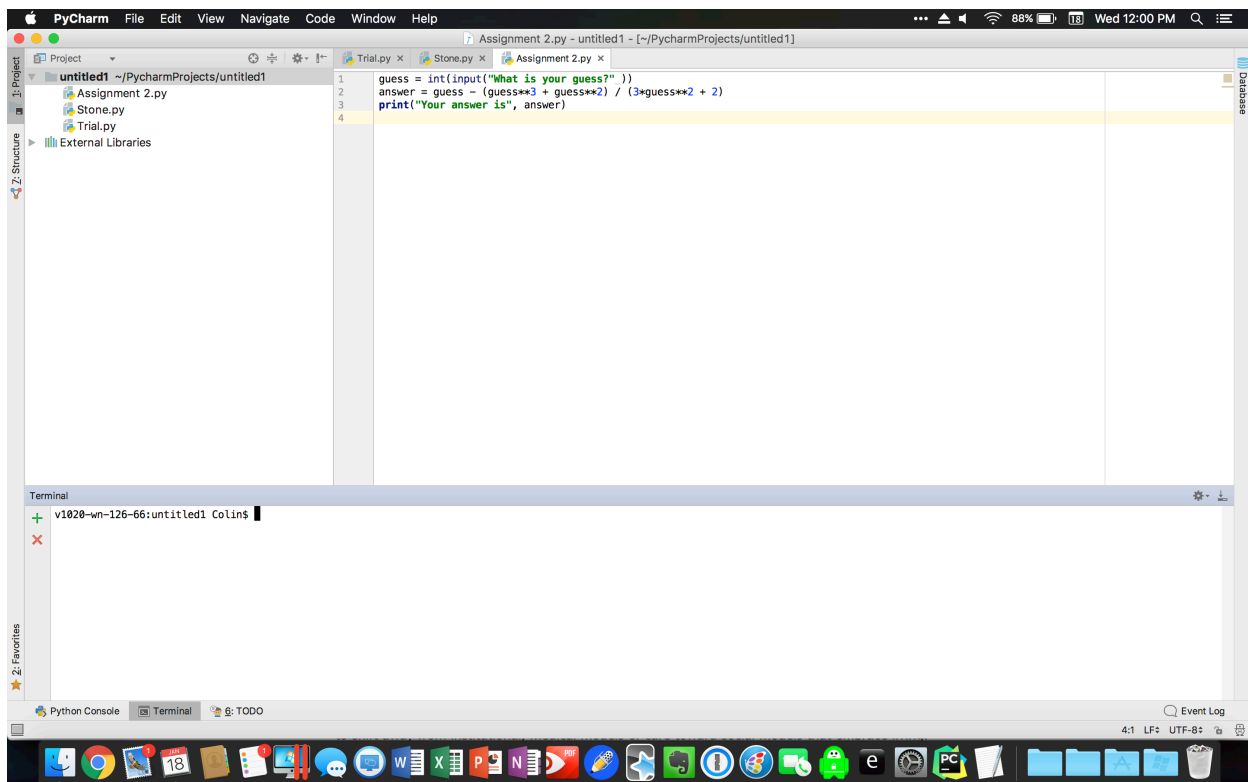

Figure 1, PyCharm running on my installation of macOS.
